

# BW #3

▶ Get out your cell organelle paper and prepare to take a few notes!

Use this chart to help you with your project.

### Organelles of the Cell

Cell Part	Function	Picture	Way to Remember (comparison)
Plasma Membrane (Cell Membrane)			
Cytoplasm			
Ribosomes			
Endoplasmic Reticulum			
Golgi Apparatus			
Mitochondria			
Lysosomes			
Vacuole			
Chromatin/Chromosomes			
Nucleus			
Nucleolus			
Centrioles (animal cell only)			
Flagella/Cilia (animal cell only)			
Cell Wall (plant cell only)			
Chloroplasts (plant cell only)			

HOW DOES A SCIENTIST CALL HIS FRIENDS?

WITH A CELL

memegenerator.net

# Cell Organelles

WHAT THEY ARE, WHERE THEY'RE FOUND AND WHAT THEY DO...

# Cell Membrane:

- ▶ **The cell membrane helps move things into and out of the cell:** things such as ions, hormones, water, food and waste products.
- ▶ Like a:
  - ▶ Door
  - ▶ Gate
  - ▶ Window

# Ribosomes:

- ▶ These tiny structures are found floating throughout the cytoplasm or embedded on the endoplasmic reticulum (which is why it gets called the “rough endoplasmic reticulum”)
- ▶ **They produce proteins** based on the instructions in our DNA/RNA
- ▶ Like a
  - ▶ Factory

# Endoplasmic Reticulum:

- ▶ There are two types:
  - ▶ 1. **Smooth endoplasmic reticulum** (Smooth ER) **makes and transports lipids.** Many chemical reactions take place on the smooth ER
  - ▶ 2. **Rough endoplasmic reticulum** (Rough ER) gets its name because it has ribosomes on its surface. **Proteins are produced and transported here**
- ▶ Like
  - ▶ A road

# Golgi Apparatus:

- ▶ This large organelle looks like a series of flattened pancakes.
- ▶ It has a lot of jobs because it **receives, sorts, packages and transports all of the larger molecules in the cell.**
- ▶ Like
  - ▶ A post office
  - ▶ Fed Ex, UPS

# Mitochondria:

- ▶ These organelles are easy to spot (often compared to orange slices) and have a huge job in the cell: **they make all the energy (ATP)** that an organism needs to survive.
- ▶ This is the site of cellular respiration (where our sugars, proteins and fats are broken down into energy)
- ▶ Like
  - ▶ A powerplant, a Solar panel
  - ▶ Wind mill

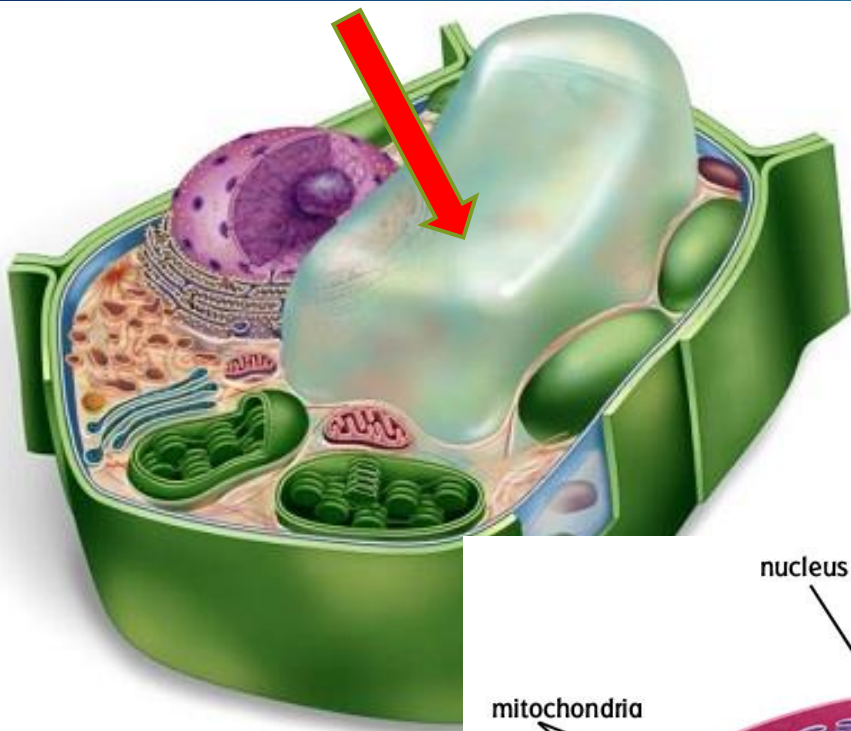

# Lysosomes:

- ▶ Digest unwanted materials in the cell
- ▶ Like
  - ▶ Recycle Factory
  - ▶ Garbage Man
  - ▶ Dump

# Vacuole:

- ▶ Stores nutrients, water and wastes.
- ▶ IN plant cells, the vacuoles tend to be rather large while in animal cells, they are relatively small.

- ▶ Like a
  - ▶ Suitcase
  - ▶ Storage shed

# Nucleus:

- ▶ Controls the functions of the cell, contains DNA
- ▶ Like
  - ▶ A Mayor controls a city
  - ▶ The brain controls the body
